

RMAXX

Facade protection

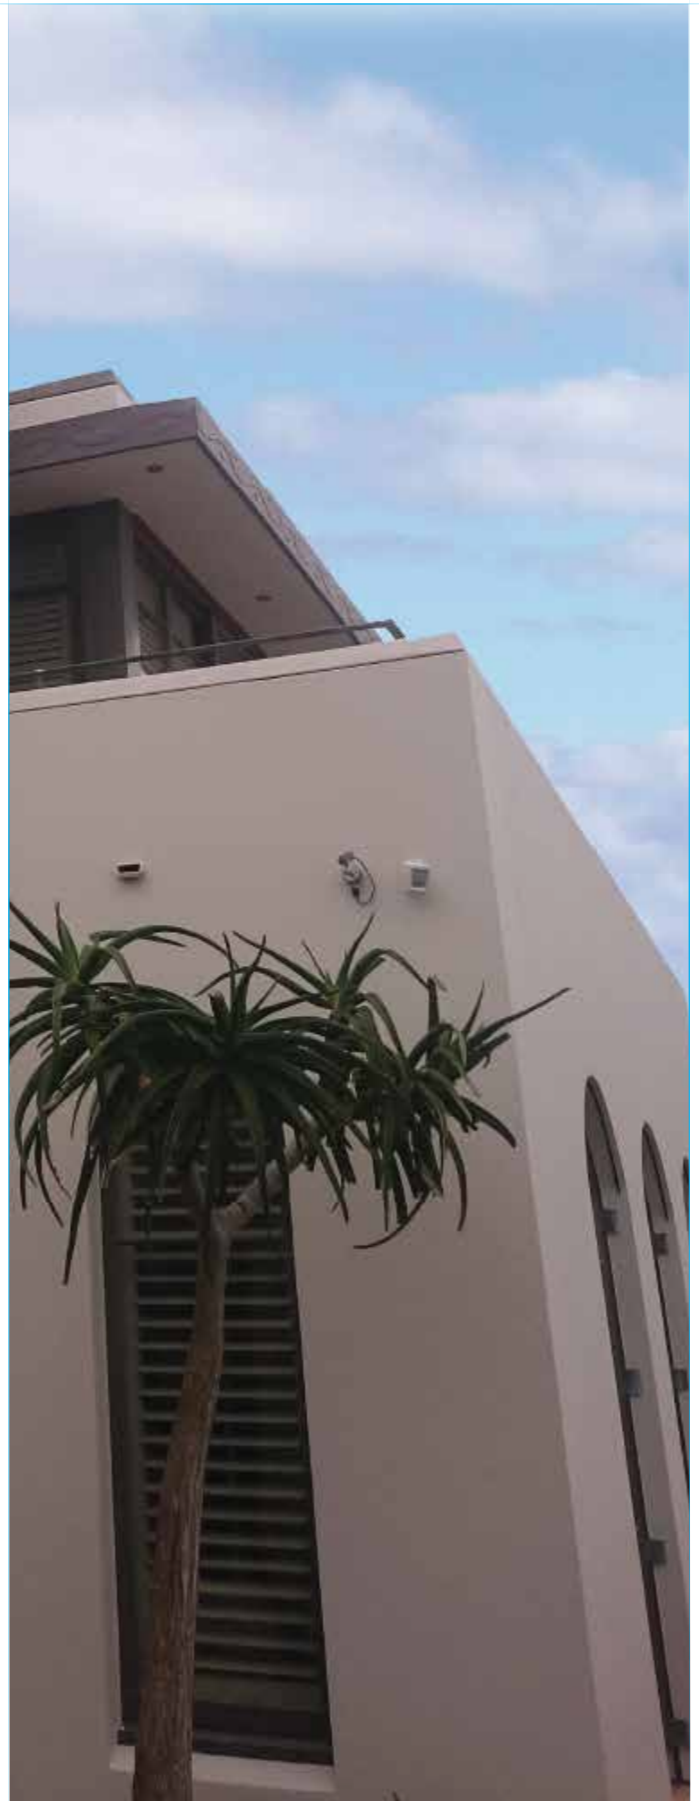

Durability and protection are two key factors when considering construction systems in the harsh New Zealand climate.

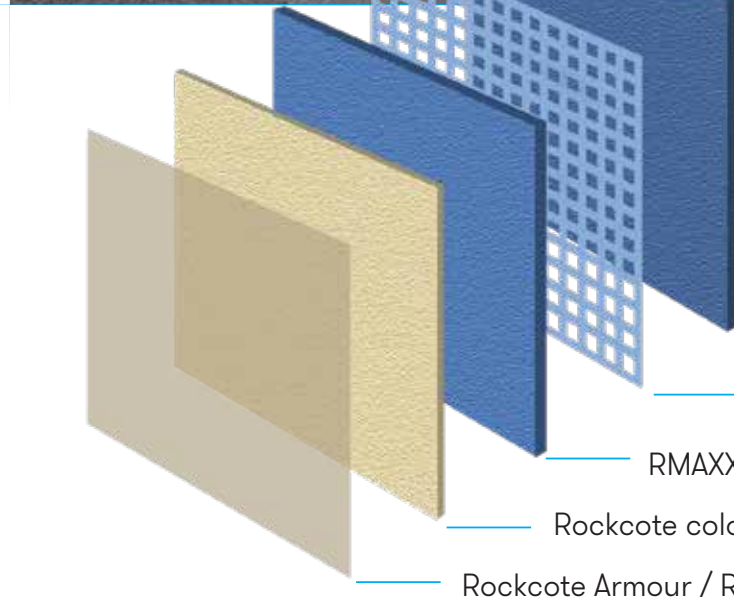

RMAXX - our premier cement-free, micro fibre enhanced polymer base coat provides a high strength, crack resistant and durable exterior facade coating system.

Thanks to its polymer technology RMAXX has incredible flexibility with excellent adhesive properties to provide cover and protection to your most important investment.

Applied by hand or pump to the entire prepared surface, with our premium 150gsm fibreglass matt and you have a resilient, reinforced base preparation that once cured forms a strong and durable, crack resistant background that is ready to accept one of our specialist pre-coloured Rockcote or Resene acrylic finishes that will enhance and protect your project for many years.

Application over common new or existing substrates can be achieved with our full preparation, and substrate specifications.

RMAXX

Features

- Flexible
- Durable
- Crack & Impact resistant
- Excellent adhesion
- Pre-mixed, easy application
- Breathable
- Weatherproof
- Waterbased
- Micro fibre reinforced
