FRR 30/30/30

- 90x45 framing at 400mm centres
- 140x45 framing at 600 centres
- 2400mm stud height
- 50mm Integra Panel
- 10mm GIB Fyrelite® one side fixed to GBTL 30
- Timber framing as per section 6.3
- Full Render System with Mineral Texture and Rockcote Lumbersider

The external walls are required to be fire rated depending upon the situation when the wall is close to a boundary or a neighbouring property in order to comply with NZBC clause C3. The walls included in this section are load bearing walls as per NZS 3604. Special attention must be paid to junctions and penetrations in external walls. The external claddings may be required to be fixed over a cavity and the cavity must not open into the roof space or sub floor space.

For buildings within the scope of NZS 3604 the bottom plates for all fire rated walls must be supported and fixed to floors using a Pryda Brace Anchor fixed with Ramset 'Anka Screw' M12 x 150mm or proprietary fasteners as per Section 7.5.12. of NZS 3604. For the Specific Engineering Design projects (SED), it is the structural engineer/designer's responsibility to ensure that the floor and wall connections are designed/ constructed to withstand the emergency loading requirements expected as per Clause B1 of NZBC.

Refer to NZBC E2/AS1 for information on Ground Clearances

Sheet
 36.18.50

INTL30 - TWO Way FRR - Timber Frame – 30 minute - Integra Lightweight Concrete Façade System with 1 layer of 10mm GIB Fyreline®

Framing to comply with

- NZBC B1 – Structure: AS1 Clause 3 – Timber (NZS 3604) or VM1 Clause 6 – Timber (NZS 3603)
- NZBC B2 – Durability: AS1 Clause 3.2 – Timber (NZS 3602)
- Studs at 600mm centres maximum
- Nogs at 1200mm centres for Horizontal fixing

Cladding to comply with

- NZBC Clause B1 Structure
- NZBC Clause B2 Durability
- NZBC Clause E2 External Moisture
- NZBC Clause F2 Hazardous Building Materials

Wall Heights

- Loadbearing – Framing dimensions and height as determined by NZS 3604 stud and top plate tables for loadbearing walls.

Linings

- 1 layer of 10mm GIB Fyreline® Plasterboard on the inside of the frame
- Vertical or Horizontal fixing permitted. Sheets shall be touch fitted.
- When fixing vertically, full height sheets shall be used where possible.
- All sheet joints must be formed over solid timber framing.

Lining Fasteners

- 41mm x 6g GIB® Grabber® High Thread Drywall Screws or
- 40mm x 2.8mm GIB® Nails.

Lining Fastener Centres

- 300mm centres on the sheet perimeter.
- Place fasteners 12mm from bound sheet edges and 18mm from sheet ends.
- Single screws or nails at 300mm centres to intermediate studs.

Linings Jointing

- All fastener heads stopped and all sheet joints tape reinforced and stopped in accordance with the publication entitled "GIB® Site Guide".

Cladding

- 1 layer of 50mm Integra Lightweight Concrete Panel installed over a Timber Batten

Cladding Fastener Centres

- No closer than 50mm from the perimeter of the panel
- 3 screws per panel per stud
- Screws to be just below the surface of the panel

Cladding Mortar Joints

- Where panels join another panel or joints must use Rockcote MultiStop Bedding Compound to mortar the panels together.

Battens

- 20 mm minimum thickness – to give a 20 mm minimum width cavity
- 40 mm minimum width
- H3.1 treated
- SG6 grade radiata pine timber
- 75mm x 3.15mm hot-dip galvanised
- Fastened at 300mm centres
